TELOMY

The longevity operating system — your body, your doctor, your wellness centre, in one place.

A complete brief for the website design team

October 2026 · v1

01 What Telomy is

Telomy is one platform that connects the four people in the longevity journey — the **individual**, their **doctor**, the **wellness centre** that delivers care, and the **network operator** that runs it all. Proprietary wearables feed a validated biological-age engine and an on-device AI; a shared care graph keeps everyone in sync. Most rivals sell one slice — a ring, a lab panel, or clinic software. Telomy is the whole loop.

4	**3**	**3+**	**1**
connected surfaces user · doctor · centre · admin	device streams ring · ECG/HRV patch · WHOOP	validated age engines PhenoAge · KDM · HD	app runs a whole centre ops + billing, no add-ons

Spa/wellness tools (Zenoti, Mindbody) run operations but have no devices, no biomarkers, no clinician console. Clinical EHRs (Jane, DrChrono) chart and bill but ignore wearables and aren't built for therapies/memberships. Labs-as-membership players (Function, Superpower) own the consumer but have no centre software and no hardware. **No one spans device telemetry → biological-age engine → consumer app → clinician console → centre operations → network admin.** That integration is Telomy's white space — especially in India, where no dominant longevity-ops platform exists yet.

02 The USPs — why Telomy wins

Lead the website with these. Each is a real, defensible differentiator grounded in the product and the competitive landscape.

One platform, four connected roles

User, doctor, wellness centre and network admin share one live care graph — a doctor intakes a patient and refers them to a centre; the centre onboards a walk-in and assigns a doctor; it all stays in sync. No competitor spans all four.

Proprietary multi-device telemetry

A smart ring + an ECG/HRV patch + WHOOP integration give continuous AND clinical-grade signals — HR, HRV, SpO■, temperature, ECG, sleep. The patch is the true hardware differentiator; the ring and WHOOP are table-stakes done well.

Validated, honest biological age

Multiple peer-reviewed engines (PhenoAge, Klemera–Doubal, Homeostatic Dysregulation), validated on public NHANES data, plus organ & system ages. It never fabricates a marker it didn't measure — trust over hype.

On-device AI (Sinc), grounded

An assistant that runs on the phone, works offline, and is number-grounded: every figure it states comes from your real data — no hallucinated numbers. Deep research taps the cloud only when asked.

A 3D digital twin

Your physiology as an interactive 3D body — tap an organ system (heart, metabolism, liver, recovery) to see what your data says. A signature, demo-able visual for the hero section.

Talk-to-track

Say anything to Sinc and it becomes a tracked dataset with a baseline and a plan — turning natural language into longitudinal measurement.

One app runs the whole centre

Scheduling, memberships, therapies, machines, staff of every kind, performance, revenue, fulfilment and billing across every gateway — in a single app. Replaces a stack of siloed tools.

Open & interoperable

FHIR export, API keys and webhooks mean Telomy plugs into existing hospital/clinic systems instead of locking centres in.

India-first, globally ready

Market-fit pricing for India, local-lab ready, and built for the markets where an integrated longevity platform doesn't yet exist — with a founder-level cost and distribution advantage.

Continuously improving science

New findings become data, not a rewrite: a science registry lets new papers and markers slot into the engine without a rebuild, and the model keeps getting better over time.

03 Who it's for

Four audiences, four landing experiences. The site should let each self-select quickly.

The individual	Health-curious adults who want to understand and extend their healthspan — see their biological age, sleep, recovery and trends, talk to an AI, and connect to a real doctor and centre.
The doctor	Longevity/preventive clinicians who want a risk-ranked panel, a review queue built from real device + lab signals, fast charting, e-prescribing, consults and monthly reports.
The wellness centre	Longevity clinics and wellness centres that need to run everything — members, scheduling, therapies, machines, staff, fulfilment, billing — and want device + biomarker intelligence their current tools can't give.
The network operator	The super-admin running a network of centres and doctors — onboarding, assignment, and a live view of people, staff and revenue across the whole network.

04 Features — by product surface

- **Today** — recovery dial, sleep score with full hypnogram, strain, and the day's vitals; fully customisable home.
- **Biological age** — multiple validated ages (PhenoAge/KDM/Homeostatic Dysregulation), plus heart, muscle, fitness and organ/system ages, with pace-of-aging from your history.
- **3D Digital Twin** — interactive anatomy driven by your data; tap a system to see findings.
- **Sinc AI** — on-device, number-grounded assistant: quick answers, deep research, on-device mode.
- **Vault** — labs, test reports, imaging, connected devices and longitudinal vitals in one place.
- **Talk-to-track & trackers** — turn any statement into a tracked dataset with baselines and plans.
- **Goals, routines & nutrition** — food/meal logging, routines, protocols and curated supplements.
- **Longevity dial** — PhenoAge / GrimAge-style summary and pace-of-aging at a glance.
- **Family & emergency** — profiles, emergency card; your data stays on your own devices and records.

- **Risk-ranked patient panel** — ordered by predicted risk and open flags, with CVD/diabetes filters.
- **Work queue / care review** — insights surfaced from the patient's own data, awaiting clinician sign-off.
- **Clinical charting** — note templates (SOAP etc.), sign-off, and full patient detail (labs, bio-age, trackers).
- **E-prescribing** — clinician-signed prescriptions; medicines require a signed plan (safety-first).
- **Consults & monthly reports** — on-demand + clinic consults; monthly report signing.
- **Patient intake & referral** — take in a patient and refer them to a wellness centre in one step.

- **Members & patients** — onboard people, assign them to doctors, full profiles and history.
- **Scheduling** — resource-aware bookings across rooms, machines and staff; check-in.
- **Memberships & packages** — plans with credits, assessment packages, à-la-carte therapies.
- **Therapies & machines** — build the catalogue; assign operators/therapists (duties) to each.
- **Staff of every kind** — admins, managers, front desk, therapists, operators, nurses, physios, nutritionists, trainers — with profiles and performance.
- **Performance & revenue** — per-staff delivered sessions and revenue; centre revenue; all derived from the live ledger.
- **Billing & payments** — invoices, subscriptions and every gateway (UPI AutoPay, Razorpay, Cashfree, PayU, card, cash) with fee reconciliation and MRR.
- **Fulfilment & logistics** — curated supplements, medicines (against a signed Rx) and lab-sample pickups, delivered to the customer.
- **Goals, modules & interoperability** — configurable modules/catalog, custom fields, FHIR export, API keys and webhooks.

- **Onboard centres & doctors** — stand up a new centre with its admin, mint and affiliate doctors.
- **Assign across the network** — patients ↔ centres ↔ doctors on one care graph.
- **Network overview** — live people, staff and revenue across every centre.

05 Devices, data & the science

Hardware and engine — the substance behind the USPs.

- **Smart ring** — continuous HR/HRV, SpO■ and temperature, with motion-gated overnight capture.
- **ECG/HRV patch** — clinical-grade ECG, HRV and continuous recording; the proprietary differentiator.
- **WHOOP integration** — continuous HR, HRV, SpO■, respiratory rate, skin temp and sleep.
- **Offline-first sync** — devices buffer on-board and sync to a stable cloud endpoint; nothing lost on a dropped link.

- **Validated methods** — PhenoAge (Levine 2018), Klemera–Doubal, Homeostatic Dysregulation; validated against NHANES public data.
- **Organ & system ages** — heart, metabolic, liver, fitness, muscle and more, from the markers you actually measure.
- **Honest by design** — never reports a marker it didn't measure (e.g. no methylation output without a methylation test); the model's figures sit alongside the validated engine, never contradicting it.
- **Always improving** — a science registry lets new research and markers integrate without a rebuild; the roadmap adds a dynamics-aware 'pace of aging' layer on top of the trusted engine.

06 Pricing & packages

Market-researched for India, positioned between mass executive health-checks and premium longevity clinics. Shown here so the site can present plans clearly.

Tier	Price	What's included
Core Longevity (Monthly)	■12,999 / mo	Quarterly 90+ biomarker panel · 2 consults/mo · 4 therapy credits · dietitian
Core Longevity (Annual)	■1,29,999 / yr	Everything in Core · ~2 months free · annual DEXA + VO■
Plus Longevity (Monthly)	■24,999 / mo	Monthly consults · 8 therapy credits · 1 IV/mo · quarterly DEXA · 130+ panel/qtr
Elite Longevity (Monthly)	■99,999 / mo	Dedicated physician · unlimited consults & therapies · monthly full panel + imaging

One-time assessment packages: Essential Health Check ■4,999 · Longevity Assessment ■24,999 · Comprehensive Longevity Panel ■49,999 · Executive 360 ■89,999.

À-la-carte therapies: infrared sauna ■900 · cold plunge ■600 · HBOT ■4,500 · IV drip ■3,500 · DEXA ■3,500 · VO■/CPET ■6,000 · blood panel ■5,500 · consult ■1,500.

Positioning note for the site: Oura ~$70/yr and WHOOP $199–$359/yr are device+app; Function/Superpower ~$499/yr are labs-membership; Neko £299/scan is a clinic. Telomy bundles device + consultations + therapies + the clinic loop, so the renewal reason is the integrated experience, not a one-time number.

07 Trust, privacy & safety

- **Honest science** — outputs are decision-support, correlational biological age, never a diagnosis; we never fabricate a measured marker.
- **Clinician in the loop** — medicines and prescriptions require a doctor-signed plan.
- **Privacy by design** — a person's raw data stays isolated to them; built toward India's DPDP Act (consent, deletion-on-withdrawal) and HIPAA-style controls (access control, audit logging, encryption).
- **Separate logins** — consumer, doctor, centre and super-admin are distinct accounts and workspaces.
- **Test data is labelled** — synthetic/demo data is always flagged and never presented as real.

08 For the website team — structure & tone

- **Hero** — the 3D twin + one line: 'Know your real age. Change it.' Primary CTA: Get your biological age.
- **How it works** — wear → measure → understand (AI + twin) → act (doctor + centre).
- **Three audience paths** — 'For you' / 'For doctors' / 'For centres' (the super-admin is sales-led, not a public page).
- **The science** — the validated engines, honest framing, 'always improving'.
- **Devices** — ring + patch + WHOOP, with the continuous + clinical-grade story.
- **Pricing** — the plan ladder above, with the integrated-loop renewal reason.
- **Trust & privacy** — the points in §07.

Brand & tone

- **Aesthetic:** calm clinical-premium — think Oura × Linear × Stripe. Confident, quiet, precise; not loud 'biohacking'.
- **Palette:** deep ink near-black, a single primary green (#137A5F) with a soft mint (#E6F3EE), a copper accent (#C9792F). Generous whitespace, tabular numerals for data.
- **Type:** a clean humanist sans (Inter is used in-product) with an occasional serif display for warmth.
- **Voice:** honest and specific — real numbers, no hype, 'decision-support, not diagnosis'.
