

# Sample Diagnostics (fictitious test laboratory)

TEST DATA — NOT A REAL MEDICAL REPORT. FOR SOFTWARE TESTING ONLY.

## Continuous Glucose Monitoring (CGM) 14-day Report

|            |                                                    |             |             |
|------------|----------------------------------------------------|-------------|-------------|
| Patient    | Test User (SAMPLE)                                 | Age / Sex   | 34 Y / Male |
| Patient ID | TST-000123                                         | Referred by | Self        |
| Collected  | 06-Oct-2026                                        | Reported    | 06-Oct-2026 |
| Method     | FreeStyle Libre 2, 14 days, 96 % sensor wearSample |             | See test    |

| Test                         | Result | Unit  | Reference range | Flag |
|------------------------------|--------|-------|-----------------|------|
| Mean glucose (CGM)           | 106    | mg/dL | < 105           | H    |
| Time in tight range 70–140   | 78     | %     | > 85            | L    |
| Glucose variability CV       | 21     | %     | < 36            |      |
| Glucose management indicator | 5.8    | %     | < 5.7           | H    |
| Mean post-meal peak          | 162    | mg/dL | < 140           | H    |
| Time below 70                | 0.4    | %     | < 4             |      |

### Interpretation / notes

Post-meal peaks above 140 mg/dL mainly after late dinners. GMI agrees with laboratory HbA1c.

Electronically generated sample report. Fictitious laboratory and patient.
