

Sample Diagnostics (fictitious test laboratory)

TEST DATA — NOT A REAL MEDICAL REPORT. FOR SOFTWARE TESTING ONLY.

FibroScan (transient elastography) Screening Test

Patient	Test User (SAMPLE)	Age / Sex	34 Y / Male
Patient ID	TST-000123	Referred by	Self
Collected	18-Sep-2026	Reported	18-Sep-2026
Method	FibroScan 630 Expert, M probe, IQR/M 9 % Sample		See test

Test	Result	Unit	Reference range	Flag
Liver stiffness (FibroScan)	5.8	kPa	< 7.0	
Controlled attenuation parameter	262	dB/m	< 248	H

Interpretation / notes

CAP 262 dB/m: mild steatosis (S1). Liver stiffness 5.8 kPa: advanced fibrosis unlikely. Concordant with MRI-PDFF 9.4 %.

Electronically generated sample report. Fictitious laboratory and patient.
